PRESS RELEASE

‘Light that makes the difference visible’

VS ADD® Light brings light to where storage space is used

Pordenone, 20 October 2026 – **At SICAM 2026, Vauth-Sagel shows how VS ADD® Light has evolved: the lighting concept has become a programme of precisely tailored lighting sets for the VS TAL®, VS COR® and VS SUB® product families. Each set is matched to its fitting and directs light precisely onto the storage levels that are actually used – automatically when opened, with an adjustable light colour depending on the set, app-controlled if desired, or integrated into the existing 12 V kitchen lighting. True to the brand message: ‘Comfort makes the difference.’**

The cabinet is bright – its contents are not.
Conventional cabinet lights are usually fitted in the top panel. Pull-outs, trays and shelves block their light before it reaches the lower levels – especially in tall larder units and deep corner cabinets, much remains in the shadows. This is exactly where **VS ADD® Light** comes in. Instead of planning lighting and fittings separately, Vauth-Sagel thinks of both together: the lights are developed for the respective fitting and positioned where they reach the storage levels in use. So the difference lies not in more light, but in better-placed light.

VS TAL®: light for every storage level.
In the **VS TAL® Larder** and **VS TAL® Gate** tall unit pull-outs, LED strips sit directly beneath the shelves, complemented by a light on the upper profile of the support frame. This means every level below also receives targeted light from above. The shelves are powered via a conductor rail attached to the back of the frame – so the tool-free height adjustment of the shelves is fully retained. Depending on the design variant, the strips are attached with magnetic pads or clips. A wireless sensor switches the light on when the unit is opened.

VS COR®: light that follows the movement.
For the half-opening **VS CORNERSTONE® Maxx** corner cabinet, Vauth-Sagel has developed two-stage lighting. An aluminium profile installed horizontally in the door opening first illuminates the rear of the cabinet when the door is opened. When a tray slides out, directed light falls forward onto its base and makes the contents visible. The set comprises eight variants – in widths D400, D450, D500 and D600, each for left- and right-opening cabinets. For the **VS COR® Spin** carousel solution, there are two vertical light profiles in lengths of 722 and 794 mm to suit the cabinet height; a sensor on the opening side switches the light on when the door is opened.

VS SUB®: targeted rather than widespread.
In the narrow **VS SUB® Slim, Rack, Side and Larder** pull-outs, angled LED spots direct light diagonally onto the storage levels stacked one above the other. Special mounting blocks align the spots, just 9 mm flat, precisely with the storage space. For a cabinet width of 150 mm, one spot is sufficient; for 200 to 300 mm, two spots arranged one behind the other do the job. A door sensor activates the lighting automatically.

Comfortable, individual, easily integrated.

What all sets have in common is a noticeable gain in everyday comfort: when the door is opened or the pull-out is drawn out, the light dims up gently to full brightness (soft-on/soft-off). Thanks to Emotion technology, the light colour can be adjusted, depending on the set, from a cosy warm white of around 2,700 K to a clear cool white of around 6,500 K.

There are three options for the power supply. The **Start Set** with the 12 V **MEC Lite** power supply unit (40 W) provides a compact basic supply with six connection points; the light is switched on and off by a sensor when the unit is opened. The **Zigbee Set** with the 12 V **MEC Lite** power supply unit (60 W) and Zigbee control module is designed for controllable installations: via an existing smart home bridge, light colour and brightness can be controlled by app, voice assistant or optional remote control. Both sets are available in versions for the EU, UK and USA. Alternatively, **VS ADD® Light** can be integrated into a compatible, existing 12 V lighting system; an adapter is optionally available for the Häfele Loox system. This means **VS ADD® Light** need not remain an isolated lighting system but can become part of the kitchen's overall lighting.

One set, one box, everything fits.
Each lighting set is matched to the respective fitting unit and contains all the necessary components in one box: product-specific LED lights, wireless receivers and IR sensors, fixing material, supply cable and distributor, as well as assembly instructions and wiring diagrams. For furniture manufacturers and kitchen planners, this means no individual engineering, but a coordinated set for the respective fitting.

With **VS ADD® Light**, Vauth-Sagel makes visible what the brand stands for: **Comfort makes the difference.**

PRESS RELEASE

VAUTH-SAGEL:

Contemporary, innovative storage solutions. That is what Vauth-Sagel has stood for at its core for more than 60 years. As an owner-managed family business, Vauth-Sagel consistently puts people's desire for comfort, ease of use and everyday practicality at the centre of everything it does.

Development, production and sales focus their entire expertise on this aim – day in, day out. What began as a core competence in the kitchen and furniture industry has evolved into advanced storage solutions for modern living spaces.

This shared commitment motivates more than 850 employees to manufacture over 85 million products every year – all to the highest 'Made in Germany' quality standards. Combined with decades of cross-material experience, this gives Vauth-Sagel's customers around the world clear advantages.

Guided by its promise 'Creating high-quality system solutions for living spaces. For everyone.', Vauth-Sagel develops forward-looking concepts for product design and interior functionality that noticeably enhance order, comfort and quality of life in everyday use.

Because: Comfort makes the difference.
